

Bandwidth in a Box™ Surveillance

Bandwidth in a Box Surveillance is a portable wireless surveillance system that delivers very high quality video and audio between two points over a distance up to 30 miles. Two rugged mobile cases (a transmit case and a receive case) contain all the components necessary to create the portable wireless surveillance system. In field surveillance applications, the system delivers a secure high-quality surveillance solution that includes 30 fps full motion color video with very low delay, pan-tilt-zoom camera control, video stream indexing, 30 hour battery life, and 30 hour recording capability.

The following items are packaged in two compact carrying cases, each half containing everything that is needed for one end of the surveillance link:

Video Transmit Case

- Strongbow™ high-quality, low latency video compressor
- High-quality day/night video camera and stand
- High-quality directional microphone
- Battery
- Wireless IP unit
- Interconnecting cables
- Mounting poles for camera and wireless IP unit

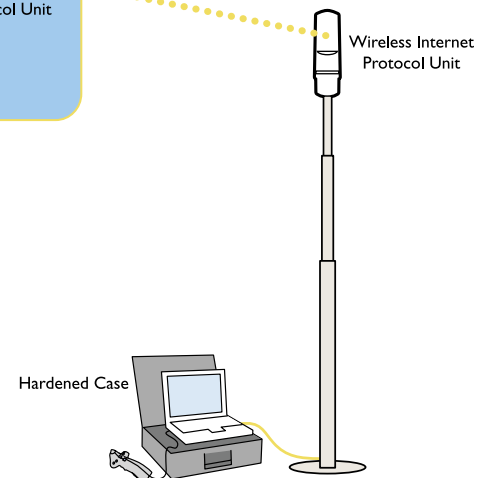

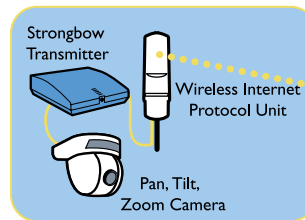

Video Receive Case

- Wireless IP unit
- Laptop computer
- **Bandwidth in a Box Surveillance** software
- PTZ and image control joystick
- Video recording and storage device
- Snapshot image color printer
- Audio headset
- Battery
- Interconnecting cables
- Mounting poles for camera and wireless IP unit

Features

- Video latency of 150ms
- Video stream snapshot indexing for easy retrieval of vital footage
- Local audio commentary recording
- Immediate snapshot printing
- Extensive on-line "HELP" facility
