

THE LEADING SURVEILLANCE MANAGEMENT
SOFTWARE FOR DIGITAL SURVEILLANCE NETWORKS

MAVIEW™ Console

Integrated IP Surveillance Management Software

The MAVIEW™ Console is an Integrated Monitoring Management Software application, providing the highest level of integration and automation for transportation, industrial control, security and access control applications using multimedia monitoring over IP.

Operating under Microsoft Windows NT, MAVIEW™, with its intuitive GUI (graphic user interface), simplifies the operation and management of intelligent remote monitoring systems. MAVIEW™ improves the operator's efficiency by providing visual and graphical representations of the locations being monitored.

MAVIEW™ offers precise control of the remote monitoring hardware devices connected to the

MAVIX MediaRacer Multimedia Servers. The devices are represented as easy-to-understand icons on graphical site maps of the monitored areas. The operator, with a single click of the mouse, can control any device connected to the MediaRacer devices, such as individual pan-tilt-zoom cameras, audio devices, sensors and alarms control. The operator can also run the system in an automatic or event driven mode through the use of pre-defined scenarios.

MAVIEW™ also generates reports and activity logs and supports simultaneous switching of video, audio, and data. Additionally, MAVIX offers well-defined API (application program interface). MAVIEW™ API provides a system interface for solutions requiring support for sophisticated applications or third-party management software integration.

highlights

- Windows based application with graphical user interface (GUI)
- High level of integration and automation for the remote monitoring devices
- Control of remote sensors, alarms, cameras, audio and data devices
- Alarm on predefined events and incidents
- Computer site map, with icons, and visual display on workstation screen
- Information reports and activity log
- Multiple and hierarchical users and operation centers
- Compatible with the MAVIX flexible and user friendly SDK (COM & DLL formats) and API
